

The graph illustrates the relationship between the number of iterations (x-axis) and the number of nodes (y-axis). The x-axis ranges from 0 to 100, and the y-axis ranges from 0 to 10. The data points, represented by blue circles connected by a line, show a step-wise increase in the number of nodes as iterations progress. The number of nodes starts at 0 and increases to 10 after approximately 100 iterations.

The line graph illustrates the growth of the population aged 65 and over in the United Kingdom from 1970 to 2020. The vertical axis represents the population in millions, ranging from 0 to 12. The horizontal axis represents the year, from 1970 to 2020. The population starts at approximately 3.5 million in 1970, rises to about 5.5 million by 1975, and then continues a steady upward trend, reaching approximately 10.5 million by 2020. The graph shows a significant increase in the population aged 65 and over over the 50-year period.

The graph illustrates the demographic trend of an aging population in the UK. The x-axis represents years from 1960 to 2010 in 5-year increments. The y-axis represents the population in millions, ranging from 0 to 10. The data points are connected by a solid line, showing a consistent upward trend with a slight dip in the early 1960s. The population growth is most rapid between 1960 and 1970, and then continues at a more gradual but steady pace until 2010.
