

The graph illustrates the demographic trend of population aging in the United Kingdom. The x-axis represents the year from 1960 to 2020, and the y-axis represents the population in millions, ranging from 0 to 12. The data shows a consistent upward trend, with the population of people aged 65 and over increasing from approximately 4.5 million in 1960 to about 10.5 million in 2020. The growth is relatively steady until around 2010, after which it appears to accelerate slightly.

Year	Population (millions)
1960	4.5
1965	4.6
1970	4.7
1975	4.8
1980	4.9
1985	5.0
1990	5.1
1995	5.2
2000	5.3
2005	5.4
2010	5.5
2015	5.6
2020	5.7

The graph illustrates the growth of the network over 100 iterations. The number of nodes remains at 0 for the first 80 iterations. At iteration 81, the number of nodes increases to 10. This increase is maintained until iteration 85, where it jumps to 20. The number of nodes remains at 20 until iteration 90, where it increases to 30. This pattern continues, with the number of nodes increasing by 10 at each subsequent 5-iteration interval (95 to 100, 100 to 105, etc.), until it reaches 100 at iteration 100.
